ABOUT

# I design products people can actually use, and I review the ones that aren't there yet.

I take products from research and information architecture through to high-fidelity prototypes and developer handoff. Because I also write front-end code, my recommendations come with a clear view of how they will be built.

Much of my work is for users who are easy to design badly for: field health workers on low-bandwidth phones, land surveyors working offline, clinicians in busy facilities, and citizens using government services for the first time.

Today I lead UX consulting engagements, from platform reviews and pre-build assessments to full redesigns, alongside product design for growing businesses.

**8+**

YEARS IN PRODUCT DESIGN

**4**

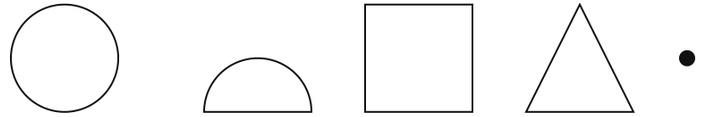

COUNTRIES DELIVERED IN

WHAT I DO

- UX reviews and platform audits: usability, UI, accessibility, brand consistency
- Product and interface design, from research to design systems
- Mobile-first, low-bandwidth and offline-first experiences
- Front-end build (HTML, CSS, JavaScript, WordPress) and coded prototypes

SECTORS

DIGITAL HEALTH | GOVERNMENT | FINTECH | AI PRODUCTS | EDUCATION

A NOTE ON THIS PORTFOLIO

MUCH OF MY CLIENT WORK IS UNDER NDA. WALKTHROUGHS OF THAT WORK ARE AVAILABLE ON REQUEST.

SELECTED WORK

# Three case studies, one method, and the work I can’t show.

01 Ardhisasa — GOVERNMENT
Kenya’s national digital land platform · field app & national launch

02 Botswana EMR — DIGITAL HEALTH
Electronic medical records for Botswana’s health facilities

03 EasyMeal — CONSUMER
Workplace cafeteria meal booking app

04 How I run a UX review — METHOD
My method for independent, pre-launch platform reviews

05 Work under NDA — INDEX
Open Chanjo, ADHN, SAIIL, FantasyCaster and more

CASE STUDY 01 · GEO-PROJECT KENYA

# Ardhisasa

Kenya's national digital land platform, giving citizens, professionals and government a single place to interact with land information and processes.

I was UI/UX Lead for the platform's Android applications, including the app field surveyors use to capture land data, and I led the team that built the app used to launch the platform nationally.

ROLE

UI/UX Lead · Project Lead (launch app)

CLIENT

Ministry of Lands, Kenya

PLATFORMS

Android (phone & tablet), web

USERS

Field surveyors, officers, citizens

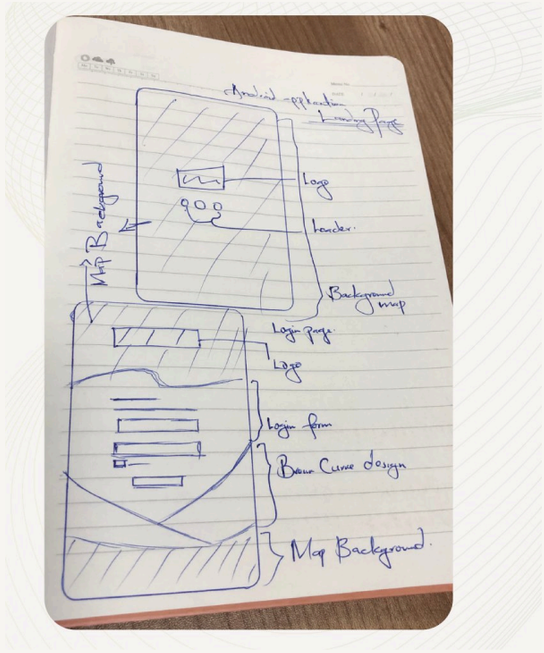

LANDING & SIGN-IN

# A visual language drawn from the land itself

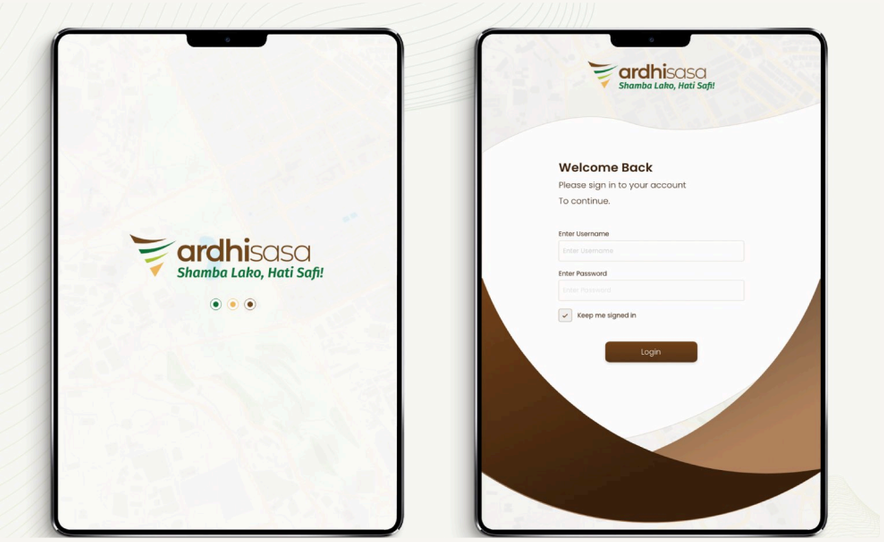

The app is used in the field, so the landing screen sits on a map background. The sign-in form is framed like a parcel of fenced land seen from above, and the sweeping curves borrow from sand dunes, rendered in the client's brand colours.

WHAT I DID

- New concept for the landing and sign-in screens
- Defined the colour palette for the app
- Ran stakeholder feedback rounds and iterated

Early sketch: map background, logo with loader, framed form

Final landing and sign-in screens

PROBLEM FOUND IN TESTING

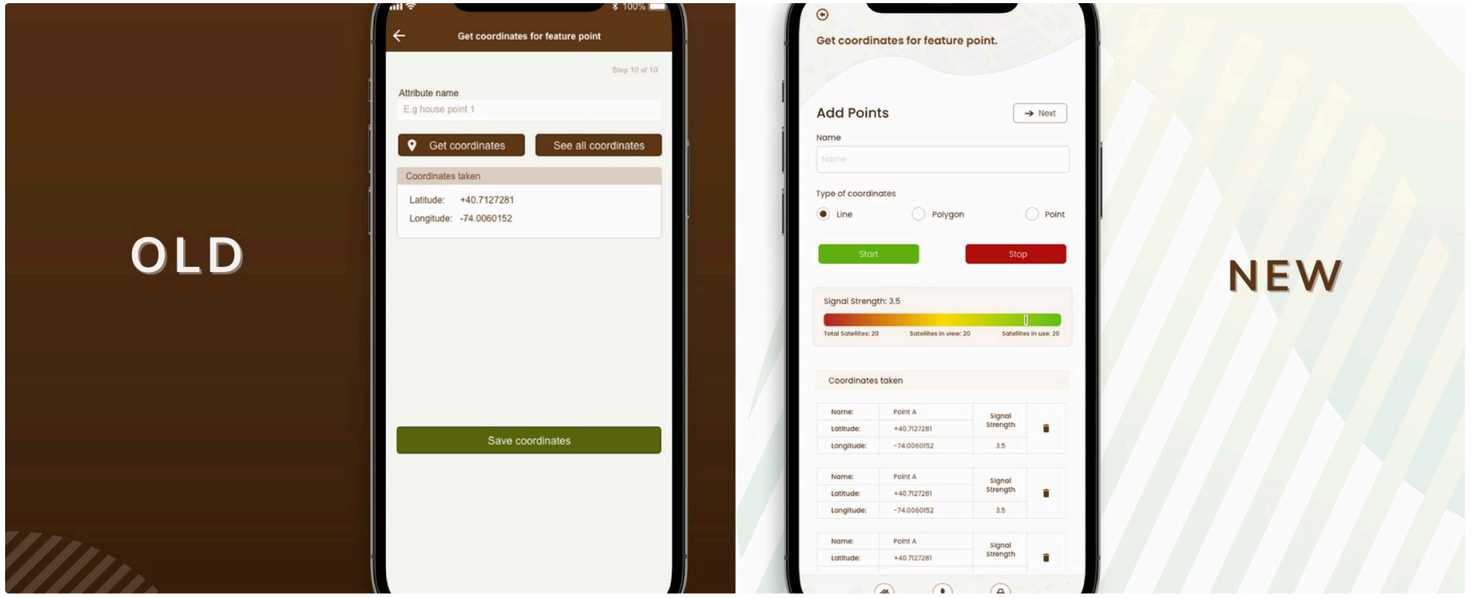

# Surveyors couldn't tell how accurate their GPS fix was

During testing, a surveyor reported that pinning exact coordinates was hard because the app gave no sense of GPS signal quality. Points were being saved without anyone knowing whether they could be trusted.

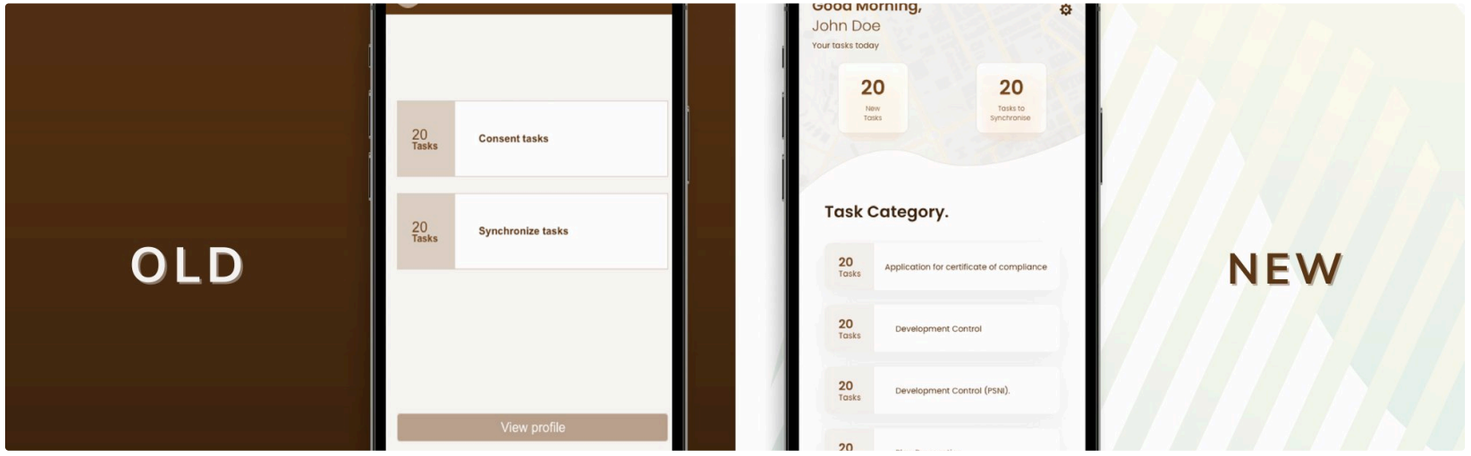

I worked with stakeholders and the Android team on a **signal-strength scale**, inspired by a pH scale, that slides from weak to strong in real time and shows satellites in view and in use. Every captured point also records its signal strength, so accuracy can be checked later.

ALSO REDESIGNED

The home screen: a greeting, counters for tasks assigned and completed, and tasks grouped by category, in the same visual language as sign-in.

Location capture: before and after

Home screen: before and after

PROJECT LEAD

# Designing the moment the platform went live

Ardhisasa was launched by President Uhuru Kenyatta. We built a simple Android app for the occasion: pressing the launch button set off a countdown on the venue's large screens, followed by a video and confetti as the portal went live.

### PROJECT LEAD

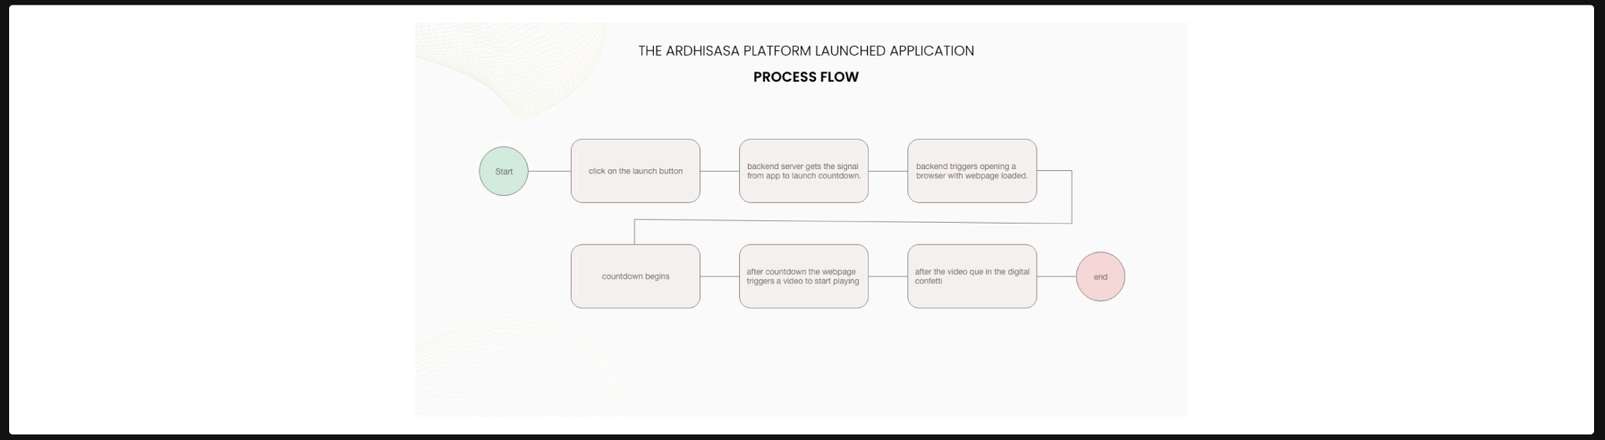

Assembled a team of three developers, set the timeline, defined the concept and requirements, and presented to stakeholders.

### UI/UX DESIGN

Designed the launch app and the countdown experience from the requirements.

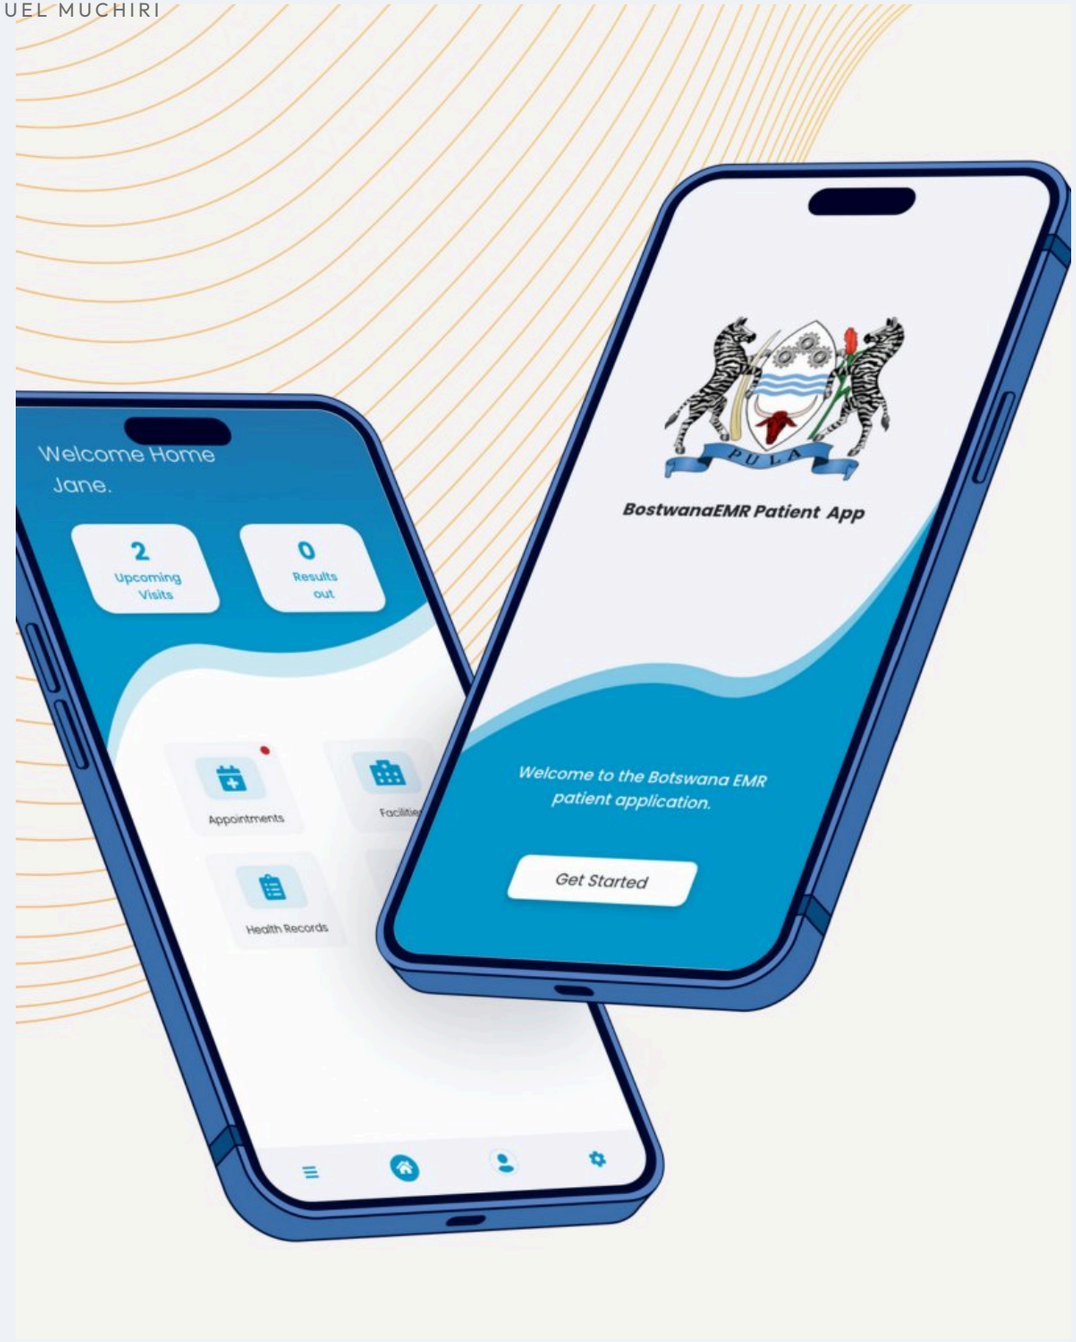

### FRONT-END

Built the countdown website in HTML and JavaScript. The app ran on Android with a Python backend.

Launch process flow: button press, backend signal, countdown, video, live portal

CASE STUDY 02 · INTELLISOFT KENYA

# Botswana EMR

Replacing paper-based records in Botswana's health facilities with an electronic medical record built on OpenMRS.

Paper records were slow to work with, error-prone and hard to share between facilities. The challenge was to give clinicians and administrators a system faster than paper, with access to sensitive patient data tightly controlled.

## MY CONTRIBUTION

- Led design of the EMR dashboards and clinical workflows for clinicians and administrators
- Designed role-based access and permission tiers with the development team
- Designed the companion patient app for appointments and records
- Built on a reusable, accessible component library shared across IntelliSOFT platforms

## NOTE

**Clinical screens are confidential; a walkthrough is available on request.**

CASE STUDY 03 · CONTRACT

# EasyMeal

A cafeteria app that lets members of an organisation book their meals for the next day or the whole week.

I was contracted to design the app and create the concept for the Android build, from sketches of the sign-in, registration and home pages to final screens.

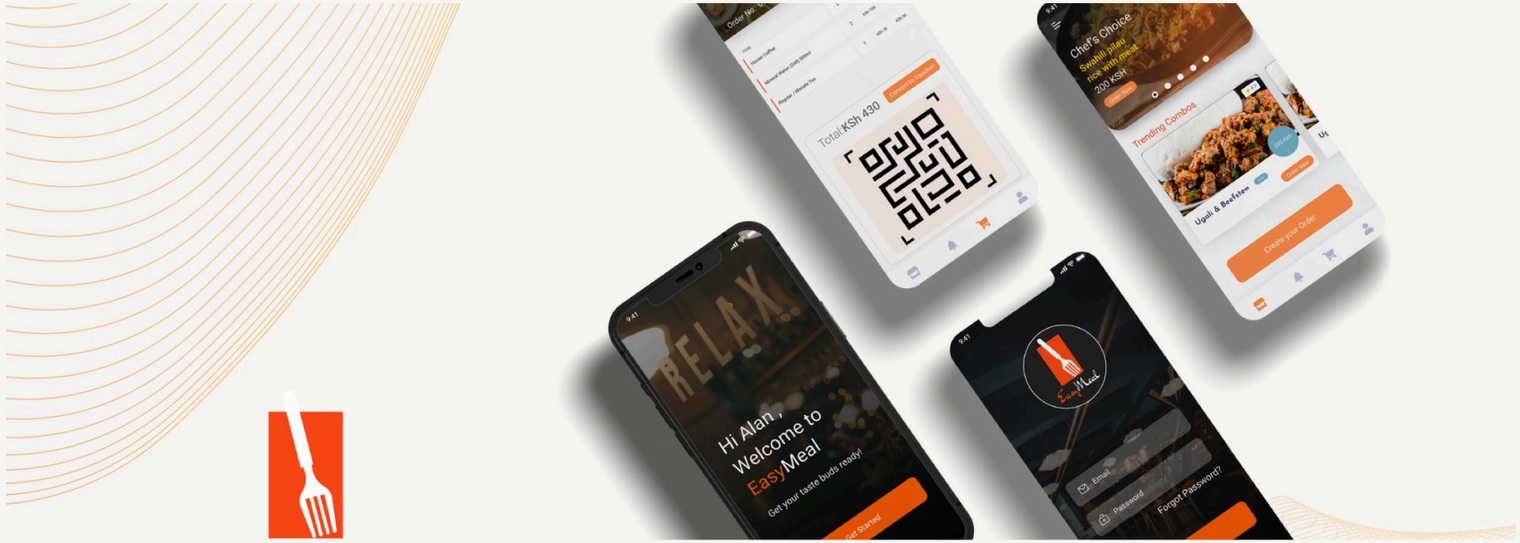

ROLE

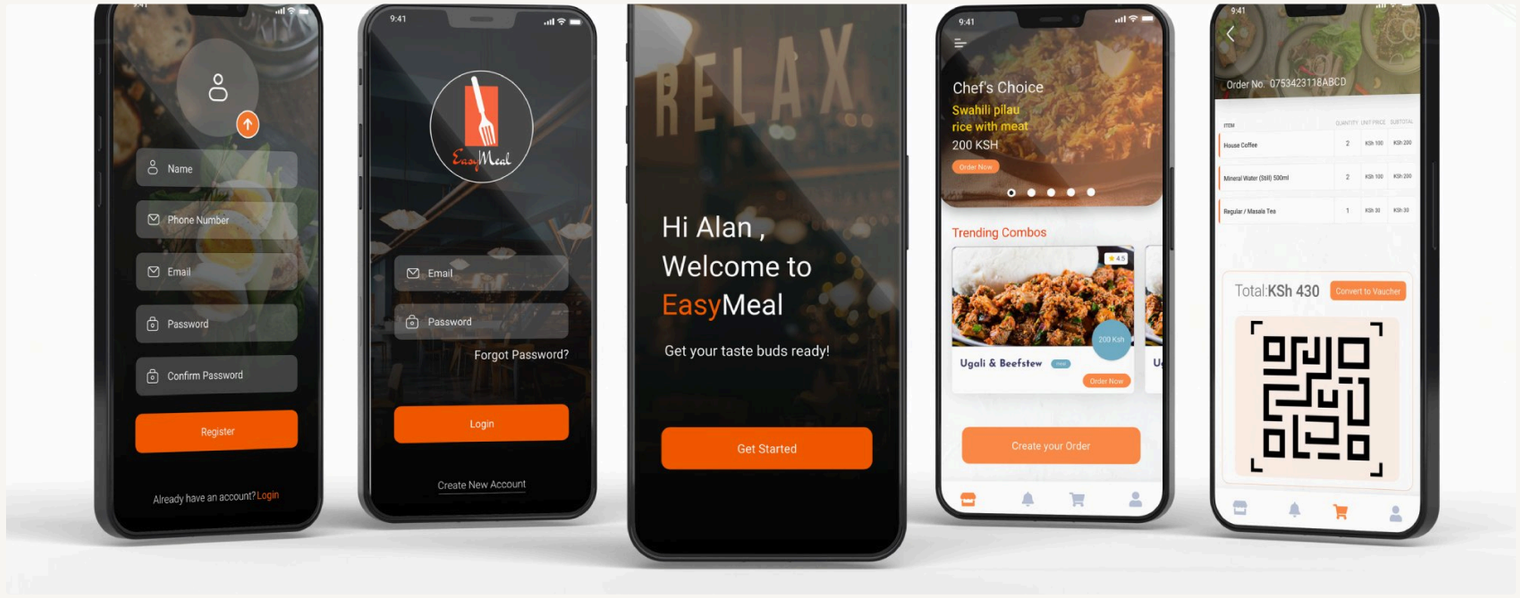

Product & UI design

PLATFORM

Android

A dark, food-first interface with a single orange action colour, so the next step is always obvious.

INDEPENDENT UX REVIEW

# How I review a platform before launch

I use the same method for website and platform reviews, most recently for ADHN's website assessment and SAIIL's UX review. The output is a short, prioritised list your team can act on, not a long report.

01

### Discovery

Goals, users, launch timeline and constraints with your team.

02

### Usability

Heuristic evaluation of key journeys, finding friction and error-prone steps.

03

### Experience

Navigation, information architecture, content clarity, task completion.

04

### Interface & access

Hierarchy, components, responsiveness and WCAG 2.1 AA checks.

05

### Brand consistency

Typography, colour, imagery, icons and tone across every screen.

06

### Report & walkthrough

Annotated findings ranked by priority, presented to your team.

EXAMPLE OF THE FINDINGS FORMAT

| PRIORITY | AREA | FINDING | RECOMMENDATION |
|---|---|---|---|
| **Before launch** | Sign-up · Usability | Errors only appear after submitting the whole form | Validate inline, field by field, in plain language |
| **Fix soon** | Interface · Accessibility | Grey helper text fails WCAG contrast on white | Darken to meet the 4.5:1 contrast ratio and update the token |
| **Later** | Brand consistency | Three button styles used for the same primary action | Consolidate into one primary button component |

NOT SHOWN PUBLICLY

# The work I can't show

Most of my recent work is covered by client confidentiality. I'm happy to walk through any of these projects, including my role, decisions and outcomes, in a call.

DIGITAL HEALTH · KENYA

## Open Chanjo

National vaccination platform: dashboards for national and county administrators, and mobile-first data capture for field health workers.

DIGITAL HEALTH · PAN-AFRICAN

## ADHN

Website assessment, migration and redesign for the Africa Digital Health Network, moving into a member platform.

AI & INNOVATION · AFRICA

## SAIIL

UX and navigation review, an on-site resources library, and separate staff and public access to the sandbox/testbed.

AI PRODUCT · SAN FRANCISCO

## FantasyCaster

Founding UI/UX designer: design system, broadcast platform UX and AI content pipelines for a 0-to-1 startup.

DIGITAL HEALTH · KENYA

## PSS v2.0

Pharmaceutical systems: simplified complex workflows and reusable patterns for data-heavy tables, analytics and forms.

DIGITAL HEALTH · ETHIOPIA

## Bahir Dar eHospital

Business analysis and UX for an ophthalmology EMR: patient records, supplies, staffing and scheduling.

SECURITY & TRAINING

## Kenvision Techniks

Redesign with course application and payment, a student portal and a role-based admin portal.

CONSULTING · KENYA

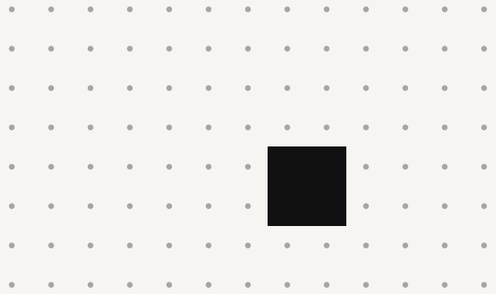

## Smart Regional Consultants

Rebrand and WordPress CMS rebuild with M-Pesa payments and event management.

FINTECH · KENYA

## Tumizi

Introduction video and full design handoff for a business spend and payout platform.
